EDUCATION

University of Waterloo

September 2023 – Expected April 2028

Bachelor of Applied Science in Computer Engineering

Waterloo, ON

- **Coursework:** Data Structures and Algorithms (C++), Systems Programming (C), Computer Networks

TECHNICAL SKILLS

Languages: Go, Python, Bash, PowerShell, C/C++, Java, JavaScript/TypeScript, SQL

Infrastructure: Linux, Docker, Kubernetes, Terraform, Helm, AWS ECS/EKS, Azure, GCP, Ansible, Ceph

CI/CD & Observability: GitHub Actions, GitLab CI/CD, CircleCI, Sentry, Slack, systemd, Prometheus

Data & Frameworks: Kafka, RabbitMQ, PostgreSQL, DynamoDB, MySQL, MongoDB, FastAPI, Puppeteer, OpenAI

Certifications & Awards: Microsoft Certified: Azure AI Fundamentals (AI-900); Nokia “Scrumptious” Team Award

EXPERIENCE

Scrawl | AWS, Terraform, PostgreSQL, GitHub Actions, Sentry

Vancouver, BC

DevOps & Infrastructure Intern

May 2026 – August 2026

- Scaled **Poppy AI**, a GitHub Actions PR reviewer used by **50+ employees**, to process **1,000+ line diffs** in minutes through parallel parsing, embedding deduplication, and OpenAI APIs.
- Built an **agentic tax-verification pipeline** combining Puppeteer/BrightData scraping, citation-graded OpenAI research, and government-rate reconciliation across **12+ jurisdictions** and **43K+ rows**.
- Integrated telemetry with **Sentry-to-Slack alerts**, synchronized interdependent API releases with a **DynamoDB-backed deployment lock**, and resolved dev environment access issues using **1Password CLI**.
- Resolved recurring **AWS ECS** scraper OOM failures by distributing workloads, enforcing memory limits, and provisioning fixes with **Terraform**.

Nokia | Linux, Docker, Kafka, Azure, FastAPI, MySQL

Ottawa, ON

Network Automation Intern

September 2025 – December 2025

- Engineered an agentic-AI based **FastAPI/Kafka** alarm pipeline with **Azure Table Storage** checkpoints, restoring persistent state after VM failures.
- Reduced **ticket-resolution time** by **67%** while publishing **100+ diagnostic worknotes per second**.
- Deployed Docker Compose services to **Linux VMs** with **systemd** startup and restart policies for automatic recovery.

Software Developer Intern

January 2025 – April 2025

- Architected **GitLab CI/CD** pipelines and Dockerized legacy applications, standardizing automated builds and deployments.
- Migrated a mail service from **SMTP** to the **Microsoft Graph API** with OAuth 2.0 and automated MySQL admin in Python.

Zafin | Docker Compose, React, Spring, Django, MongoDB

Toronto, ON

Technical Consultant Intern

May 2024 – August 2024

- Developed a Dockerized **full-stack rules engine** tailored to **international bank** use cases using React, Spring, Django, and MongoDB.

PROJECTS

WATCloud (Design Team) | Ansible, Prometheus, Ceph, Kubernetes

- Helping maintain a distributed cloud computing network, providing scalable and resilient infrastructure for 10+ engineering design teams across the university.
- Implementing automated telemetry and monitoring pipelines for a distributed **Ceph** storage cluster utilizing **Ansible** and **Prometheus** to ensure robust system observability.

WiFi Sentinel | Go, SQLite, Firebase Firestore, Telemetry, Cloud Sync

- Engineered a **Go network-monitoring daemon** that continuously tracks latency and signal health using under **1% CPU** and **20 MB RAM** in benchmarks.
- Buffered telemetry in **SQLite** and synchronized it to Firebase after reconnects using a thread-safe ring buffer.

Zero-Trust Network Security Implementation | Kubernetes NetworkPolicies, Bash

- Isolated frontend, backend, and database traffic using **Kubernetes NetworkPolicies** validated by Bash connectivity tests.
